

vibe.ibl.ai - Custom UI vs SDK

What we built vs what the ibl.ai SDK provides | June 2026

In one sentence: We built a Lovable-style app shell (sidebar, home, projects, resources). The SDK powers chat, auth, projects API, and profile - but many shell features are still custom or mock.

SDK packages: @iblai/iblai-js 1.18 | web-containers 1.9 | data-layer 1.8 | web-utils 1.10

1. Every screen - who builds what?

Screen	URL	Custom UI	SDK provides	Status
Home	/app	Welcome hero, prompt box, suggestions	Mentor discovery, memory API	Partial
Chat	/app?session=	Custom prompt footer, canvas CSS	Chat - messages, canvas, voice	SDK wired
Projects list	/app/projects	Grid/list, filters, Create btn	Projects API - CRUD	SDK wired
Project chat	/app/projects/:id	Route wrapper only	Chat + projectId landing	SDK wired
Resources	/app/resources	Template gallery (static)	No template API	Mock
Connectors	Sidebar overlay	Marketing panel, fake list	ConnectorManagementDialog	Mock
Sidebar	Always visible	Nav, recents, notifications	AppSidebar (not used)	Partial
Profile	/app/profile	Dialog wrapper	UserProfileModal	SDK wired
Login	/login	Custom login design	Auth providers, SSO	Partial
Admin	/app/admin	30+ menu items	Agent admin tabs exist	Mock nav only

2. What we NEED from the SDK (not wired yet)

These SDK features exist but our app still uses custom or fake UI instead.

SDK feature	What it does	What we do today	Priority
AppSidebar	Projects dropdown, pinned chats, recents	Custom 1,470-line sidebar + localStorage	P0
Chat history API	Server-backed conversation list	localStorage only - breaks on new device	P0
UserProfileDropdown	Profile menu + tenant switcher	Custom dropdown + demo notifications	P0
File upload	Attach files to chat messages	Drop zone shows toast only	P0
NotificationDropdown	Real notification bell + center	Hardcoded fake notifications	P1
ConnectorManagementDialog	Real MCP / connector setup	Static mock connectors panel	P1
ConversationStarters	SDK welcome prompts per agent	Static PromptSuggestions on home	P1
AgentSearch	Browse / pick agents	Single default agent from env	P2
Account page	Org settings, billing	Profile modal only	P2
Agent admin tabs	LLM, MCP, datasets, safety, etc.	Admin nav with no routes	P2
CreditBalance	Usage / credits widget	Not shown	P3
AnalyticsLayout	Usage dashboards	Not shown	P3

3. What the SDK already gives us (wired today)

SDK piece	Used for	File in our app
Chat component	Messages, streaming, canvas, voice	vibe-build-chat.tsx
AuthProvider + TenantProvider	Login session, tenant, tokens	iblai-providers.tsx
useGetUserProjectsQuery	List projects	projects-context.tsx
useCreate/Update/DeleteUserProject	Create project -> open chat	projects-context.tsx
useGetUserProjectDetailsQuery	Load project agents	vibe-build-chat.tsx
useGetMentorsQuery	Pick default agent	use-default-mentor.ts
UserProfileModal	Profile settings dialog	profile-dialog.tsx
Memory APIs	Memory popover in prompt	memory-popover.tsx
useMentorTools (Canvas)	Enable canvas per session	vibe-build-chat.tsx
Redux chat slices	Session ID, streaming state	iblai-store.ts

4. What stays CUSTOM (SDK does not provide)

Feature	Why it stays custom	Decision
Lovable-style home hero	Branded landing - not in SDK	Keep custom
Custom prompt footer	Our look; SDK input hidden via CSS	Keep custom
Resources / templates gallery	Marketing page - no SDK equivalent	Keep or remove mock
Connectors marketing overlay	Product marketing	Replace with SDK dialog later
Projects grid/list views	SDK has sidebar list, not this layout	Keep custom UI
Pending-build URL flow (?new=)	App-specific: auto-send first message	Keep custom
Canvas split CSS overrides	SDK layout tweaks for our shell	Keep custom

5. Real vs mock - quick checklist

Feature	Real data?	Source
Login / SSO	Yes	SDK auth
Chat messages	Yes	SDK Chat + WebSocket
Canvas / voice	Yes	SDK Chat
Projects list & create	Yes	data-layer API
Project chat (files, instructions)	Yes	SDK ProjectLandingPage
Profile settings	Yes	SDK UserProfileModal
Memory in prompt	Yes	data-layer API
Sidebar recent chats	Local only	localStorage
Starred projects	Local only	localStorage
Home prompt suggestions	No	Static array
Resources templates	No	Static CDN images
Connectors panel	No	Hardcoded list
Notifications in sidebar	No	Demo data
Admin console pages	No	Nav only, no routes
File attach on prompt	No	Toast only

6. Recommended next steps

#	Action	SDK piece to add	Effort
1	Replace localStorage recents with server history	Chat history API / AppSidebar	Medium
2	Swap custom profile menu for SDK dropdown	UserProfileDropdown	Low
3	Wire project card rename/delete menu	Existing mutations	Low

#	Action	SDK piece to add	Effort
4	Connect file drop to real upload	files reducer + SDK upload	Medium
5	Replace mock connectors with real management	ConnectorManagementDialog	Medium
6	Add real notifications	NotificationDropdown	Low
7	Add admin routes or remove dead nav	Agent admin tabs	High
